

The clever
option
Pillar cam

precision is our standard

Standard portfolio for a wide range of applications

Steadily increasing rationalization, rising complexity and shorter process times are ever-present challenges in a modern tool shop process. These demand clever solutions which are flexible despite standardization.

Our new pillar cam is an attractive alternative compared to self-made solutions, especially where the installation space within the tool is limited. This allows you to streamline your processes and design them effectively - and all this in usual quality and availability of FIBRO standard parts! Use our knowledge and manufacturing competence for your production.

Flexible standard

The wide product range offers solutions for different requirements and applications:
six sizes: Ø50-Ø160 mm
working angles: 50°-85°, steps 5°

Optimized usage of resources

Save time and money within die design, procurement of components and in tool shop by using the standardized cam unit.

Highest quality level

Decades of know-how and manufacturing competence result in high-level quality..
